EDUCATION

San Francisco State University

August 2023 – December 2026

Bachelor's, Computer Science

GPA: 3.42

- Relevant Coursework: Data Structures; Analysis of Algorithms; Operating Systems; Machine Structures; Software Engineering; Software Development; Introduction to Web Software Development; Programming Methodology

PROFESSIONAL EXPERIENCE

Fastly

San Francisco, CA, USA

Software Engineering Intern

May 2026 – August 2026

- Benchmarking JA3 vs. JA4 TLS fingerprinting techniques to evaluate bot and abuse detection accuracy on the Anti-Abuse, Automation & Fraud (A3F) team.
- Analyzing large-scale network traffic using Python, BigQuery, and PySpark to surface and quantify abuse patterns at CDN scale.

GitHub

San Francisco, CA, USA

Campus Expert

October 2025 – Present

- Selected for GitHub's competitive Campus Expert program supporting student developer communities.
- Promote best practices in open source, software development workflows, and peer-led technical learning.

ACM – SFSU

San Francisco, CA, USA

Outreach Officer

February 2025 – Present

- Coordinate outreach initiatives and cross-organization partnerships to grow CS student community engagement.

PROJECTS

MTGTag – Multi-label Classification ML Pipeline

August 2025 – Present

- Built a full ML pipeline from data extraction and cleaning through training, evaluation, and production inference.
- Curated datasets including 5,000 manually labeled cards and a 33,424-card domain corpus for domain adaptation.
- Fine-tuned a domain-adapted transformer model; achieved 0.9145 macro F1 with per-label threshold optimization.
- Optimized inference to ~8–10 cards/sec on GPU; reduced training time to ~35 minutes on GPU for 15 epochs.

Canvas-Notion Sync – Learning Management Integration Tool

September 2025 – Present

- Built a background sync pipeline using Canvas and Notion APIs with assignment-ID deduplication.
- Implemented a custom caching layer that reduced sync time by ~80% by avoiding redundant work.
- Added rate limiting, user-facing sync notifications, and AES-GCM encrypted local credential storage.
- Shipped as a Chrome extension; published to the Chrome Web Store with dozens of active users.

MTG Card Search Agent – Agentic Query Refinement System

July 2025 – Present

- Designed an agent-driven refinement loop with up to 5 evaluation iterations and relevance scoring.
- Built custom agent tools including fuzzy tag search over a curated MTG tag database to improve query accuracy.
- Packaged as an installable Python library with CLI support and streaming progress updates.

PaperScout – AI Research Assistant Agent

January 2026 – Present

- Built a stateful serverless system on Cloudflare Workers using Durable Objects and SQLite for per-user persistence.
- Designed a tool-based LLM agent (search, summarize, save, list, remove) with safe state mutation and confirmations.
- Implemented streaming AI summaries using Llama 3.3 70B Instruct via Cloudflare Workers AI.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java, C/C++

ML & AI: Transformers, Multi-label Classification, Domain Adaptation, PyTorch, scikit-learn, Threshold Optimization

Systems & Backend: Cloudflare Workers, Durable Objects, SQLite, REST APIs, Caching, Rate Limiting

Frontend & Tools: React, Tailwind CSS, Chrome Extensions, Git, CLI Tools

Data & Infra: Pandas, NumPy, BigQuery, PySpark, SQL Databases, GPU Acceleration, Docker
